

## Data Security and Destruction Solutions

Whether it is data security, environmental compliance or return of value through reselling services, Burroughs offers a complete end-to-end asset recovery package tailored to your specific needs.

Let us provide you with a cost-effective solution for maximizing the remaining value of your surplus assets while ensuring data security and the safe, legal recycling of

electronic desktop assets in compliance with federal, state, and local government requirements.

Burroughs knows that the most important consideration to be made when retiring surplus IT assets is how to ensure that all forms of data have been completely destroyed.

Well known is the fact that computer hard drives contain personal and confidential data, less known are other devices that also contain data that can put your company at risk. Most digital copiers, scanners and faxes manufactured after 2002 have the capability to store thousands of images on hard drives contained within the units that few people know even exist. And sensitive information can also reside on other devices such as cell phones, PDA's and networking equipment like routers and switches. Even computer monitors with burned in images can reveal data!

Data security is a big concern for all of us and as a result, the need for confidential data removal is more critical than ever!

**For detailed information on our Computer and Electronics Recycling Solutions email [Gary.Longe@burroughs.com](mailto:Gary.Longe@burroughs.com) or call 734-737-4531**

### Complete Solutions for the Secure Retirement of Your Surplus IT Assets.

Our data destruction processes follow current NIST guidelines (800-88) to ensure the complete data elimination of both electronic and hard copy forms of data.

Burroughs offers three levels of data elimination options that are Department of Defense and HIPAA compliant.

- **Data Clearing** - A one-pass overwrite of data on hard drives (studies have shown that most of today's media can be effectively cleared by a one-pass overwrite on non-secure data)
- **Data Sanitization** - A three-pass overwrite of 0's, 1's and then random characters (the most commonly chosen data destruction method)
- **Physical Destruction** - Hard drives and media are shredded in-house on our custom shredder (we do not send hard drives to third parties for this service)

Once the data elimination is complete, Burroughs records the method and date of destruction and provides you a Certificate of Destruction to back it up.

Payment Systems

## About Us

Burroughs Payment Systems, Inc. offers its customers access to world class service, industry-leading technology, and overall support for a portfolio of payment related needs.

The Burroughs headquarters, located in Plymouth, Michigan is home to research and development, manufacturing, sales and support organizations for all product lines and services. These organizations are collectively responsible for both repeatable and custom solutions like the industry-leading SmartSource® check and document scanners and SmartCash™ cash automation solutions. Enterprise servers, device performance management software, a wide range of printer products, and a variety of financial supplies combined with implementation and maintenance services complete the Burroughs portfolio.

For more information about our entire line of services visit our website site.
